

Janesville Ice Arena Safety Modification Plan in Response to COVID-19

General Modifications

1. Increased cleaning and sanitization measures will take place. This includes sanitization of high touch surfaces and areas occupied by user groups. This sanitization will occur after each user group and prior to the next group coming in. A cleaning and sanitization schedule has been created.
2. The schedule will be altered to allow for cleaning and sanitization between each group and or rental or use of ice. A half hour will be in between each different group or rental. Typically there is only ten minutes.
3. Staff will do a self-health screening and temperature check upon arrival.
4. We will operate at a reduced building max capacity of 55 max total, plus any staff.
 - 38 person max allowed on the ice and/or players benches at one time
 - 6 max allowed in the Warming Room
 - 11 max allowed in the lobby/hallway area

We understand that at the beginning players will be changing in the warming room and or/hallway area and these numbers will fluctuate by area, but max building total will be 55 and social distancing is expected.

This is 5% of total capacity of 1,211. We will initially open with bleacher area closed, but certain areas can be opened later on to increase numbers. Spectators/Parents are discouraged at open and limited to 1 parent/guardian per child that need to come in to assist younger children. determining space for 6 foot physical distancing. Max numbers will increase as conditions improve and will be communicated.

5. Separate entrance doors and exit doors will be used. The entrance doors will remain the same, but groups will now exit from the back doors to avoid groups coming in and out at the same time.
6. Groups will be given a time period they need to exit the Arena by and will be told a time frame they must abide by for entering rink. This will avoid people coming early or staying late and intermixing of groups.
7. Each rental group will be required to check their people in each time. This participant log should be turned in daily to the Ice Arena staff. Reminding participants to not enter if feeling symptoms of COVID-19.
8. Installation of hand sanitizer stations at Ice Arena. One will be located at the entrance outside of the office area, one will be located in the Warming Room, and one will be located in the general lobby area on the main rink wall.
9. Physical Distancing will be encouraged. 6 foot markers will be placed in the lobby floor and on all benches.
10. Facemasks will be required for staff. Facemasks will be required for everyone in the rink that is not on the ice. There will be available cloth facemasks for those without one.

11. The locker rooms will be closed for the time being and players will be required to come with clothes on, and will be assigned a bench area to change into skates. They are encouraged to leave as many bags and personal items in their car as they can.
12. Signage will be up in various areas of the Arena regarding COVID-19 symptoms, handwashing in bathroom, etc.
13. Bleacher area will be limited in use at the beginning and roped off sections to avoid having to clean and sanitize a large area between each group.
14. Only coaches will be permitted to operate the music system.
15. Keep concession areas closed and drinking fountains off. Players and participants should bring their own labeled water bottle.
16. User groups would be encouraged to monitor their coaches, staff and/volunteers symptoms prior to having contact with participants.
17. Each user group will be required to submit their safety modification plan. This plan will be reviewed with the City Safety team in advance to determine if additional measures needs to be implemented for safety.
18. Arena would be closed in the event of a COVID-19 outbreak and the City would follow guidelines by the Rock County Health Department regarding the duration of the closure pending the situation.

Given the rapidly evolving situation with COVID-19 the City may make modifications to these guidelines and will communicate to Ice Arena users. These guidelines will be reviewed regularly to determine if modifications need to be made.
